One-objective strategic plan

Blank planning sheet. Keep outcome measurement separate from action completion.

Plan: _____ Owner: _____

Start: _____ End: _____ Review: _____

One objective

Metric unit, definition, source and matched comparison periods

Baseline: _____ Target: _____ Current: _____

Available plan minutes: _____ Allocated-plan budget USD: _____

Action / owner	Due date	Minutes	USD	Status

Metric progress = (current - baseline) / (target - baseline) x 100.

Target must differ from baseline; lower targets mean a decrease is intended.

Raw metric progress can be negative or above 100%; it is not task completion.

All action minutes and allocations are planned totals, including completed actions.

No scheduling-conflict detection, reminders, bank cash or automatic collection.

Keep an editable same-tool JSON backup in the browser worksheet.

One-objective strategic plan

Fictional example only - invented observations and allocations, not business results.

Objective: improve qualified inquiries with a defined review workload.

Owner: Example owner | Plan: Nov 12-Dec 11, 2026 | Review: Nov 12, 2026

Metric: unique qualified inquiries under the same definition and source rule.

Baseline window: Sep 14-Oct 13; current: Oct 14-Nov 12 (30 days each).

Baseline 20 | Target 40 | Current 30 | Metric progress: 50.0%

Remaining metric gap: 10 units. This is not a causal effect or forecast.

Action / owner	Due date	Minutes	USD	Status
Offer review / owner	Nov 20	180	$100	done
Two variants / editor	Nov 27	240	$150	active
Outcome review / owner	Dec 04	60	$50	planned

Planned effort: 480 minutes | Capacity: 420 | Capacity gap: 60 minutes

Allocated cost: $300 | Budget: $350 | Budget headroom: $50

Actions marked done: 1 of 3 (33.3%), separate from 50.0% metric progress.

Next decision / evidence to verify

Resolve the capacity gap; extra budget does not create additional time.

The interactive worksheet supports CSV, editable JSON backup and browser print.
